

# 2019 SPRING TREE SEEDLING SALE

Transplants are bareroot plants that have had their root system pruned and planted back in the ground. This greatly increases the survival when again dug and planted. A 2/2 transplant has spent two years in a seedling bed and two years in a transplant bed. These have excellent survival when given good weed and grass control, and they are easy to plant. We take only prepaid orders while quantities last, **so order early!** The pickup location is as it has been the last couple of years behind our office in the new pole building. However, we will have only a one day pickup during business hours **8:00 a.m. to 4:30 p.m. on Friday, April 19, 2019.** Please make arrangements to have your prepaid orders picked up for best survival of your seedlings.
